CERTIFICATE

Satel Spain S.L.

An external security assessment has been performed within the **SenNet Device Manager Platform** in order to identify security weaknesses that could be compromised by attackers to gain remote access to the application.

The result of the assessment led to the impression that the application implements enough security measures to avoid unauthorized remote access and is not considered to prone an immediate risk. After a vulnerability assessment of the application and the execution of targeted security test, no critical or high severity vulnerabilities could be identified.

Security Rating:

Low   Medium   High
